

ASSIGNMENT 8

1. Write a python code to Network Packet Analysis with Scapy

ANS:

NETWORK PACKET ANALYSIS

```
[ ]!pip install scapy
```

```
[ ] from scapy.all import *
```

```
[ ] def analyze_packets(packet):
```

```
    if IP in packet:
```

```
        src_ip=packet[IP].src
```

```
        dst_ip=packet[IP].dst
```

```
        protocol=packet[IP].proto
```

```
        print(src_ip)
```

```
        print(dst_ip)
```

```
        print(protocol)
```

```
    if TCP in packet:
```

```
        src_port=packet[TCP].sport
```

```
        dst_port=packet[TCP].dport
```

```
        flags=packet[TCP].flags
```

```
        ## Firewall Rules
```

```
    elif UDP in packet:
```

```
        src_port=packet[UDP].sport
```

```
        dst_port=packet[UDP].dport
```

```
    elif ICMP in packet:
```

```
        icmp_type=packet[ICMP].type
```

```
        icmp_code=packet[ICMP].code
```

```
    print(src_port)
```

```
    print(dst_port)
```

```
print(flags)
```

```
p- data packet PA/A-Ack
```

```
[ ] sniff(prn=analyze_packets, filter="ip", count=10)
```

2. Phishing Website Detection with Python

ANS:

WEBSITE DETECTION

```
[ ] !pip install pyzbar
```

```
Collecting pyzbar
```

```
  Downloading pyzbar-0.1.9-py2.py3-none-any.whl (32 kB)
```

```
Installing collected packages: pyzbar
```

```
Successfully installed pyzbar-0.1.9
```

```
[ ] !apt-get install -y libzbar0
```

```
[ ] import cv2
```

```
from pyzbar.pyzbar import decode
```

```
[ ] import requests
```

```
    from bs4 import BeautifulSoup #REST, SOUP
```

```
    from sklearn.feature_extraction.text import TfidfVectorizer
```

```
    from sklearn.ensemble import Random Forest Classifier
```

```
    from sklearn.model_selection import train_test_split
```

```
    from sklearn.metrics import accuracy_score
```

```
[ ] def extract_url_qr_code(image_path):
```

```
    image=cv2.imread(image_path)
```

```
    decoded_objects=decode(image)
```

```
    if decoded_objects:
```

```
        url = decoded_objects[0].data.decode('utf-8')
```

```
        return url
```

```
    else:
```

```
print("Data cannot be extracted. Possible Phishing")
```

```
return None
```
