

1. You have given a Python list. Write a program to find value 20 in the list, and if it is present, replace it with 200. Only update the first occurrence of an item.

Solution:

```
l=[20,40,50,24,20]
l1=l.index(20)
l[l1]=200
print(l)
```

2. Given a Python list, write a program to remove all occurrences of item 20.

Solution:

```
l=[20,40,50,24,20,42,51,20]
for i in range(0,6):
    if l[i]==20:
        l.remove(20)
```

```
print('updated list:', l)
```

3. Given a two Python list. Write a program to iterate both lists simultaneously and display items from list1 in original order and items from list2 in reverse order.

Solution:

```
list1=[20,34,32,45]
list2=[33,23,21,56]
for i,j in zip(list1,list2[::-1]):
    print(i,j)
```
